**Mac Driver For Toshiba E-studio 3005ac**

Hi, Here is the situation: 1) Toshiba Colour copier model E-Studio 281 using costs up with different rates for colour and B&W printing. We have to be able to send print jobs without specifying that it is supposed to be a B&W print (non-staff public users) by selecting a printer labeled B&W. We cannot print a B&W PDF document to the same printer; it does print but in full colour. It needs to work as only B&W printing 2) The company is charged more for the total colour printing than for the B&W printing. Here is the issue: We can print to the B&W print (using the drivers for B&W copier) in any MS program, from the net etc. 3) We have two different print drivers set up for the copier: A) Standard 281 drivers for printing in colour B) Drivers from a similar model that is a straight B&W copier. At this moment we cannot tell if this issue plays but assuming it does this is a large expense.
